Investor Confidence in RTT

Real Time Tracking Limited - developers of the World's first real time multi-target tracking and identification system for live sporting events - having attracted interest from a number of external investment resources, are delighted to announce the agreement in principle for a six-figure equity funded package that will enable a professional commitment to the Company's future development.

Discussions with potential investors began earlier in the year following public recognition of RTT's innovative technology, then being used for the first time commercially, within the UK Greyhound Racing industry. Press coverage (Financial Times, Racing Post) detailing how RTT's advanced tracking technology was enabling the supply of 'Dynamic Sports Data' to the Bookmaking industry for their use in customer display and information systems, had raised the profile of this young British Company as 'one to watch'.

Subject to Board and Regulatory approvals, RTT intend to use the newly available funding base to expand the Research & Development capabilities of the organisation, and, accelerate the formal product development program, to ensure the delivery to market in 2006 of additional desirable technologies and products.
