RTT's First Commercial Product Reaches Market

Real Time Tracking Limited, are pleased to announce the start of Public trials for our unique tracking Technology, along with joint-venture partner - DatAcq Greyhound Racing Limited.

Swindon Greyhound Stadium, part of Gaming International Plc, plays host to the first Broadcast of a new technology that enables greyhound racing to be viewed 'Live' via computer in the form of virtual images - from anywhere in the world, across the Internet.

virtual Reality Racing, as it is known, is achieved by means of an installed RTT (image recognition) system, using cameras and computers, which track in real time, the position and identity of the racing greyhounds, live throughout an event. This information is then broadcast as a data-stream, to people anywhere in the world. This data-stream has a very small 'footprint', and may be efficiently sent over modems or even GPRS mobile phones, to Users running viewing software on their PCs, allowing them to watch live, accurate racing from wherever they are !

vTV is to feature initially on the following online-bookmaker website:
